Small Dogs Park - FAQ

1. **Clarification on what qualifies as small (a good one!).**

   Small dog breeds are generally defined as dogs that weigh under about 10–12 kg and stand less than around 40 cm tall at the shoulder. These compact companions are often grouped into the toy and small breed categories.

2. **Will there be water to drink from/water facilities.**
   Yes, there will be a drinking fountain.

3. **Request for shade sail, or for the bench to be in the shade, not sun. The area is surrounded by large trees.**

   Providing suitable shade will be considered by project managers and implemented if funding permits.

4. **Requests to improve the existing dog park.**

   The aim of this project is to expand the off-leash dog park in Wangaratta into two separate, specialised areas: a dedicated space for large, active dogs and another for smaller, more passive breeds. By adding new fencing, gates, water fountain, and play equipment, we aim to create a safer, more enjoyable environment for dogs, their owners, and the broader community.
